

In January of 2022 I endured 16 days of living hell and was assaulted and maliciously wounded by Hospital Staff at a Loudoun County, Virginia ER & Hospital. Since then I have been working to regain and recover my health and have been unable to teach due to a hyper-acute drug-induced interstitial lung disease (DI-ILD) sustained from the hospital's malicious and reckless administration of their Covid Protocol which included infusions of Emergency Use Authorization drugs Remdesivir and Baricitinib with no adherence to FDA Patient Consent Guidelines. I was never provided FDA Fact Sheets, explained the drugs were EUA drugs and never given any alternative treatment options. Despite making it clear to all nurses and doctors that I did not want to take any Remdesivir, I was given a load dose IV infusion and multiple IV infusions of Remdesivir without my permission or knowledge the first three days of my hospitalization. While in acute hypoxic respiratory failure the antiviral Remdesivir infusions induced a cellular immune response causing the air sacs in my lungs to be heavily filled with fibrin and inflammatory cells causing severe dense pulmonary opacities, worsening my oxygen levels significantly. At no time was I notified Remdesivir had been administered. Prior to admission I had tested negative for Covid 19 at my physicians office. Further more I showed no Covid antibodies in comprehensive follow-up testing done by an infectious disease specialist after my discharge. The hospital's "so called positive" covid test result was false and used as an excuse to implement the hospitals draconian Covid Protocol and policies which included immediately isolating me from my family and flooding my compromised lungs. It is by God's grace and some true medical professional heroes, my family was able to sneak Hydroxychloroquine and Ivermectin into my hospital room on day 8 of my hospitalization after tracking down the doctor and hearing that the next 48 hours would determine if I survived. This after the doctor told my husband on day 4 that I would be home in a couple of days once oxygen levels were stable. I am alive today to testify and speak for the 1.1 million precious human lives who suffered horrific deaths across this nation at the hands of a genocidal and heinous hospital protocol. What I experienced first hand and survived was the most horrific shockingly unspeakable evil that you could ever imagine happening by medical professionals who took an oath to do no harm and yet were willfully participating in murdering patients in hospitals across this nation.

Upon arrival by ambulance at the ER my family and I experienced hostility when they found out I was unvaccinated. The male "traveling" nurse physically blocked the entrance to my room and would not allow my adult daughter to enter and told her to leave. From that point I was isolated from my family, we were intentionally gaslit and I was bullied by certain staff members. I was spoken to with utter disdain and contempt by the hospital attending Pulmonologist as well as the ER nurse. The Physicians denied my requests for Hydroxychloroquine, Ivermectin and nebulizer. I was mocked by the Pulmonologist ruthlessly. When he heard I was prescribed the meds the day before arriving at the hospital, condescendingly he said, "How did that work for you?" I have been told from a Cardiologist within the hospital system that multiple doctors within the hospital were themselves taking those exact meds prophylactically, yet they were forcing EUA drugs on

patients and allowing them to die, knowing they were themselves taking Ivermectin and hydroxychloroquine that were safe and effective. Pure Evil!
