

My sister Nancy Porter lost her life on August 17, 2021 at Memorial Hermann Hospital in Houston, Texas. Her voice was silenced so I'm using mine to share her Covid hospital experience.

Nancy tested positive for Covid on August 1, 2021. On August 5 she was admitted to the hospital with difficulty breathing. The attending physician told her she was probably going to die since she wasn't vaccinated. At the time her only issue was low oxygen level (80%). She called me in tears and was very fearful. I regret not insisting she just walk out.

Once admitted she was placed on the Covid floor and given low flow oxygen, steroids and remdesivir. Low flow turned to High flow and other drugs were administered such as midazolam, lorazepam, fentanyl, narcan and insulin.

On August 10 my sister Jeanne and I were notified that Nancy's health was declining. Her kidneys were shutting down and they wanted to start dialysis and also place her on a ventilator. We told them we would fly to Texas that day and wanted to see Nancy. When we arrived that evening we were denied visiting privileges after more than 45 minutes of pleading with the nurses. We told them we would come back in the morning.

As we were preparing to leave our hotel room early August 11 a nurse called to say they needed to intubate Nancy immediately. We begged to see her first but were told no, that it was an emergency.

Nancy died 6 days later - August 17th. ALONE!! The sister who cared for our parents when they battled cancer, who was at their bedside when they passed away, had to die alone. No loved one to hold her hand, comfort her, or read scripture to her like she lovingly had done for mom & dad.

Nancy's medical records have caused us much concern. We can't understand how a healthy patient (she drove herself to the emergency room) with only a low oxygen level can pass away 2 weeks later from kidney failure.

Nancy went to the hospital wanting help but instead became a "Covid" statistic. Her story is similar to thousands who innocently checked into the hospital expecting care and compassion only to be isolated, drugged up then forcibly vented. We pleaded with the doctors to give our sister Ivermectin and Vitamin C only to be told NO, that was not their protocol.

Senator Johnson, please be our voice in Washington and expose those responsible for inflicting their agenda on our loved ones. In addition to wanting justice, we want to make sure Americans never lose their rights in any future "pandemics". We discovered the hard way that our ability to hold anyone responsible was forfeited with the PREP Act. Can we hope to see that horrible piece of legislation repealed, PLEASE!?!

Thank you for meeting with us and allowing our stories to be told.

Sincerely,

Nancy's big sister,

Cari Greenfield
