

My father Loius Nicolia was taken to Hamot by ambulance 11/24/21 . He was admitted and put on oxygen machine that was turned up so forceful it caused hypoxia. They said his kidneys were failing and recommended a vent to give his lungs a chance to heal. He went to Icu for a few days. Then the hospital called and said they were taking him off the vent come say good bye. My sister and I went to the hospital and I assumed that they were going to take the vent off and see if he could breathe on his own or give him a chance to see if he could make it without it but that is not what happened they gave him two shots and when I asked what the shots were for she told me one was a paralytic so that when they pulled the vent out he wouldn't choke and the second one was to stop his heart! So there was no chance at trying to see if he could breathe on his own they were just killing him! I couldn't believe that that was happening right in front of me. I wish I would have asked before they administered it! I'm sorry but I believe that's murder! I wonder how many other people they decided to stop their heart? My mother was admitted the day after my father they both had the delta my mother was in the hospital for 2 months she almost lost all of her hair I'm not even sure if it was a virus I think they were sprayed with it but I don't know I hope to find out sooner or later! And I would love to pursue litigation against the hospital for this! I have
