

For the record only

My name is Janet Eaton Mauro, I am the widow of Richard E Eaton. Richard was 64, he was healthy. Richard was my husband of almost 41 yrs , a father of three, and grandfather of eight.

I believe that the improper hospital treatment received led to Richard's death on September 8, 2021. On August 13 Richard felt that he had lost his sense of smell and had possibly contracted Covid . He felt fine, he continued to work from home. By the end of the week (8/19) he was feeling ill. He was having some trouble breathing .

On August 21, I thought I should take Richard to the ER. He was that sick and walked in on his own. As I was signing him in, a nurse came and wheeled him away . I didn't get to hug or kiss him good bye. Little did I know that I would never see him alive again.

Neither Richard or I were vaccinated. I read in his medical records what seemed to be questioning and mocking about not being vaccinated . Richard also stated that he did not want to be vented , but was persuaded to agree if needed. I have a voicemail of him telling me he was going to ICU and being put on a ventilator. He sounded so sad and afraid. Richard went to ICU and was placed on a Bi-pap high Flo.

Richard was given Remdesivir on August 21, and they added Baricitinib on the 23rd. I don't believe he was informed or consented to these EUA drugs . Remdesivir has a 53% death rate. On August 23rd , early morning, Richard coded . He was given CPR and shocked back. He was also put on a ventilator. No one treated his cardiac issues . I did get a phone call about trying to get Richard off of the vent as his peep and oxygen numbers were coming down. On the second day the doctor was perplexed and said someone fiddled with the vent. His oxygen and Peep were turned way up. After that I rarely got a call from any doctor . Richard's situation went downhill after that.

After being put on the ventilator , Richard was given a lot of sedation. He was concurrently and consistently given Medazolam, Fentanyl, Propofol. Latter they added Haldol and Phenobarbital . Richard was chemically paralyzed, as well as physically restrained. All of this depresses your breathing . Many other drugs were given as well. He was denied medications that would have been helpful. Richard was isolated, I was denied access to him, nor could I advocate for him. I requested treatment with Ivermectin , I was refused and mocked about it . I asked for the right to try Ivermectin , refused again . I asked for Budesonide and high dose vitamins. Also refused . I was told by the doctor that "he had taken an oath to do no harm". They were killing him.

Richard was hospitalized for 19 days . I believe doctors only spoke to me 4-5 times. On the 19th day, September 8th, I got a call from Palliative care. The woman on the phone started harassing me about making Richard a DNR. She said his heart was bad and he'd code. They would pound on his chest and hurt him, and send electricity through him.. is that what I wanted . I did allow him to be a DNR .i was then pushed to take him off the vent . I had been praying

about it, his body was failing. It was a hard decision . Unknown to me , the nurses had started to give Richard Morphine , increasing the dose every 30 min. They were already euthanizing him.

I was allowed to be with him as he went home to be with the Lord. He heard my voice and tears rolled down his cheeks.

His life mattered. He died from the protocol , not from Covid .
