

Official Statement Regarding the Medical Care of Brian R. Conroy

Patient: Brian R. Conroy

Date of Death: August 8, 2021

Facilities Involved: Nevada Regional Medical Center (NRMC), Citizens Memorial Hospital (CMH)

1. Hospital Admittance and Exposure (July 30, 2021)

Context: From July 26 to July 30, 2021, my husband, Brian R. Conroy, was treated at home for pneumonia with oxygen at 4 Liters.

Admission: On July 30, due to increased breathing difficulty, I drove him to the NRMC Emergency Room (ER) and informed staff of his situation.

Exposure: In the ER waiting room, I witnessed two individuals admit themselves with breathing difficulties and reported active COVID-19 infections.

Sanitation Failure: I observed that no sanitation protocols were performed in the waiting room upon their arrival, during their stay, or after they were moved to ER rooms. At this time, I was barred from accompanying my husband past the waiting room.

2. Non-Consensual Intubation (July 31, 2021) Notification: On July 31, NRMC staff notified me that Brian was being placed on a ventilator while they searched for an open bed at another facility.

Lack of Informed Consent: I immediately stated that intubation violated my husband's explicit medical wishes and beliefs. Staff claimed Brian gave verbal consent.

Incapacity: Medical charts later revealed Brian's physical and mental state at that time was inadequate to provide informed consent due to severe hypoxia and administered medications.

Outcome: I arrived at the hospital within 10 minutes of the call; Brian had already been placed on the ventilator.

3. Transfer and COVID-19 Diagnosis (August 1–2, 2021)

Transfer: On August 1, 2021, Brian was transferred to Citizens Memorial Hospital (CMH) in Bolivar, Missouri.

Diagnosis: Upon arrival, his chart listed a COVID-19 diagnosis. Prior to his NRMC admission, our entire household had tested negative via OTC test kits.

Testing Discrepancies: Both CMH and NRMC staff confirmed to me that they had not tested Brian for COVID-19 prior to listing the diagnosis.

Positive Result: I requested an official COVID-19 test on August 2, 2021, which returned positive. Based on the timeline, I believe this was a hospital-acquired infection.

4. Treatment Discrepancies and Medication (August 2–7, 2021)

Denial of Care: I requested the use of Ivermectin, which was denied. Staff stated they were using an undisclosed medication "proven effective."

Remdesivir Use: Medical records later revealed Brian was administered Remdesivir for several days. This medication was administered despite its known links to acute heart, kidney, and liver failure.

Pressure to Terminate: Throughout his stay at CMH, staff repeatedly pressured me to remove Brian from life support, which I initially refused.

Medical Record Discrepancy: Two days prior to his passing, a physician showed me a lung X-ray indicating only 5% capacity. Official medical records later revealed a different X-ray image than the one presented to me in person.

5. Organ Failure and Passing (August 8, 2021)

Complications: Within days of Remdesivir administration, Brian's heart, kidneys, and liver began to rapidly fail.

Termination of Life Support: Based on the clinical data presented by CMH staff, the 5% capacity X-ray image shown to me, and his declining lab reports, I ultimately agreed to remove him from the ventilator.

Passing: Brian R. Conroy passed away on August 8, 2021.
