

On 11/18/21, my Father was admitted to St Francis hospital in Columbus Georgia for Ketoacidosis. I have all his medical records for that time and his oxygen was over 90%. My brother brought him in and the nurses came in and instead of telling him his sugar was near death, they told my brother he had Covid and wouldn't let my brother see him. I called and demanded to speak to a doctor or nurse and they told me they were trying to get his sugar levels down which they did over the next two days. It seemed he was getting better but then when I asked them what medication they were going to give him, they said Remdesivir. I asked them not to and asked he could have Ivermectin instead and they said no. I was in Ma and so far away, I felt helpless. Then they said they had to put him on a ventilator and that he was not doing well. I only got to see him on FaceTime as they were getting him put on that ventilator. It hurt so bad as I knew they were killing him. I told him how much I loved him and to fight. They called me a couple of days later and said his organs were shutting down. Of course they were, the Remdesivir does that especially the kidneys. We received the death certificates and it said he died from Covid! I called the hospital right away and explained that he did not die from Covid. He was in Ketoacidosis. I made them change the primary reason for death but it still listed Covid as a secondary which I know was a lie. As soon as he started getting better from the Keto, they gave him Remdesivir that killed him. I have all those hospital records and can prove all of this. They won't get away with it! It's up to us that lost someone to this heinous act to fight back!
