

I was a nurse working during the heart of Covid. I refused to be vaccinated or Covid swapped . Due to these awful protocols, I was fired for not complying with there protocols. I tried to get unemployment and I was denied because they said I was insubordinate due to not being vaccinated since then I've had to change my career to a totally different journey. I am no longer working in the healthcare field, Then on August 24, 2021 my whole life, changed for the worst . my mother, my best friend was taken away by ambulance with the 69 pulse ox. They brought her to Good Samaritan hospital. I was not able to go. I had to wait for the emergency room Dr to call me she proceeded to tell me that she tested positive for Covid, double Covid pneumonia .They were giving her breathing treatments to try to bring up her pulse ox. She was admitted the next day. My father was then taken out by ambulance the next day Also positive for Covid. He was admitted as well due to the hospital protocols. I had to sit outside the hospital window with my chair and go from window to window to visit my parents . During this time they were giving her Remdisivir without my knowledge . Her breathing was getting worse so they had to put her on a BiPAP machine. My father was in the hospital for two weeks .The next day when he was home, his oxygen in the blood started dropping again. I had to bring him back to the emergency room again. he stayed another week. during his stay they told me that his pneumonia has gotten worse . He was also given Remdisivir. While my mother was on BiPAP, her breathing became worse, and they felt that she would be best if she went to the ICU . I remember my mother calling stating the pulmonologist came in to see her telling her that she was here because she was not vaccinated. Mind you, my father's roommate was unvaccinated. I do believe that she was given different treatment being unvaccinated ,I asked the hospital to give her ivermectin. They refused and told me that it was not on their protocol . I then get a phone call from the ICU stating that my mother went into cardiac arrest due to the BiPAP mask popped off and before the nurse can put the PPE on, the nurse should've already been in the PPE those minutes, caused my mother to go into cardiac arrest .At this point they told me that she needed to be put on a ventilator. I was totally against this . But had no choice because they said if she went into cardiac arrest again they wouldn't know if they could save her again..

I researched this Attorney in Buffalo that was taken on cases for a loved ones that were on ventilators and having them put on ivermectin studies showed miraculous recoveries with this. I had a meeting with infectious disease and he told me to give him 24 hours to think it over finally he was OK with starting her on ivermectin at this point she was already on the ventilator for a week. I went up every day watched them crushed the medicine as they put it down her NG tube. She took a five day course of it, and unfortunately, she passed away the following day. She was in the hospital for 42 days alone and scared. I fought as much as I could with the hospital administration to be next to my mother side. I could care less if I got this fake virus.

October sixth will be five years with no justice for my mother. I will continue to fight for her and every other person that endured what she endured.
