

Dear Senator Ron Johnson,

My name is Kathleen Lamb. I am writing this letter requesting your assistance regarding the sudden and tragic, yet preventable death of my husband Robert W. Lamb. My husband Robert was just 59 years old. He died at St. Luke's Hospital Vintage in Houston, TX on August 22, 2021 at 6:14 p.m.

Robert was an incredibly loving and loyal husband, stepfather, Papa, son, brother and friend. He was a brilliant, award-winning engineer and amazing Christian musician, vocalist, and arranger. He was admitted to the hospital for low blood oxygen saturation, severe fatigue, and persistent diarrhea. At the hospital, he was given copious amounts of black box warning drugs including but not limited to: Midazolam, Precedex, morphine, Haloperidol, diltiazem, dexamethasone, fentanyl, steroids, bipap, norepinephrine. vancomycin, Haloperidol, ketamine, Gadobutrol, Roguonium, phenylephrine, Vasopressin.

Heparin, sulfur Hexafluoride, and Redesivin, then the ventilator after which in a mere 5 days, resulted in his death.

I am in contact with thousands of survivors of loved ones who were also given this exact same Covid hospital protocol. Remdesivir was the one and only protocol mandated by none other than the infamous Anthony Fauci The same Fauci who already KNEW by 2021, that Remdesivir had a 53% kill rate for every patient it was given to. During the 2014-2016 Ebola outbreak in Africa, Remdesivir (a broad-spectrum antiviral) had been used. To say it was unsuccessful is a massive understatement. The African government— after just 3 weeks of use-removed the Remdesivir protocol due to over half of the patients were dying on it. Remdesivir rapidly shuts down the kidneys, resulting in multi-system organ failure.

None of these Covid patients had to die. Their deaths were intentional. The majority of these patients simply needed ivermectin, hydroxychloroquine, intravenous, Vitamin C, zinc, quercetin, intravenous vitamin D, and oxygen. Instead, they were denied effective, established treatment protocols and were subjected to deadly drug combinations which were contraindicated. Patients often developed secondary pneumonia associated with mechanical ventilation which significantly contributed to the patient's death. The hospitals achieved this outcome through patient intimidation, deprivation, isolation, dehydration, starvation ventilation, and then death. These deaths were hastened and incentivized by our Federal government agencies for profit over patient care and a depopulation agenda.

Thank you for your time

Kathleen Lamb
