**My late husband Kenny Anderson jr was taken from us 7/23/21. He was 29 years old. He left behind 2 very young children, and a family that loved him so very much. He was killed by the hospital protocols. 5/4/21 we were in Tennessee on vacation when he was diagnosed with covid double pneumonia. After THREE 911 calls, 1 hospital visit where they said he was fine and left him outside alone til we got there, he was admitted 5/8/21. At this point his oxygen was ranging 56-70, and even with a b-bap it just kept dropping. They gave him all the protocol meds, but still he declined. 5/18/21 doctors told me they couldn't do anything else for him, but they were med flighting him to Vanderbilt hospital. He underwent surgery for multiple things, collapsed lungs, trach. Finally, he was improving, but it really was a roller coaster of ups and downs, infections, antibiotics. Hospital staff didn't**

**properly care for him because of protocol and he developed an unstagable bedsore on his back. That bedsore eventually killed him. Beginning of July 2021 they were talking of sending him home to PA to go to rehab, but the bedsore happened. He developed sepsis, and ultimately it took his life 7/23/21. I was a widow at 31. My children now fatherless. Never would I wish this emotional roller coaster tragedy on anyone.**
