

I lost my husband, I was denied access to enter hospital, he was given medications without my permission and was not coherent to make quality decisions on his behalf. Hospital staff told me that he was a vegetable, would not be able to know who I am or what I was feeding him though he was connected to tubes. It is my belief we were denied information, proper medical assistance and denied access to save his life in a proper manner. I saw hospital staff in chaos and misleading patients and family members due to no knowledge of proper medical staff to give sound advice to other staff. I lost my best friend. Respectfully Maria Soto
