

On January 18, 2022, 6 weeks after having Covid (the family did). My mom, Norma K Rizzo (retired social worker) couldn't stand or bear weight on her leg. A strong woman who was always healthy and on zero medications was experiencing her turn for needing help in life. I was concerned enough to take her to the hospital, despite hearing many horror stories of hospitals allowing covid patients to die for big medicaid payouts. I was desperate. We speculated she was experiencing Long Covid, possible stroke symptoms?! I took her to Advent Hospital on SR 100 in Palm Coast. . We arrived between 2:00-4:00 pm. They admitted her, because she was in AFIB around 10:00 pm. They said she had Covid, but I explained she had Covid in November 16, 2021(from attending a family wedding). They dismissed my explanation of Long Covid. Despite her being in cardiac duress, they had her sign multiple forms well into the night. They waited after I left, knowing full well she was in no shape to sign. It was 11:00 pm and my mom wanted me to go home and rest. She said she felt relieved that they knew her heart was causing the symptoms and this wasn't a stroke. They had her sign a DNR as well. Upon leaving, was when they asked her questions about her vaccination status. I remember being so upset to learn she told them! They expressed concerns over the vaccines causing AFIB. She expressed she didn't receive any vaccinations. Well that information circulated like wildfire, she was treated like a lepper. Was given the furthest room from the nurses station, they never helped use the bathroom and allowed her to soil herself! They ordered her on bedrest, despite her pleas to get be given assistance to the bathroom. I was only permitted to see her between 2:00 -6:00 pm. They told me to be grateful for these windows, some places had no access to their loved ones. I asked for medications, including ivermectin, hydroxychloroquine and intravenous vitamin C. They refused, said "these were not CDC protocols". I pleaded! Was told forcefully to follow CDC protocol! Within 2 days, after initial xrays showing clear lungs, she had Covid Pneumonia. Her lungs were worse than when she arrived! They refused medications that would have given her a chance! We asked for antibody treatments too! Refused! She went into cardiac arrest. I was standing at the nurses station scolding them on the lack of care. Telling them they were basically euthanizing my mother. In that moment, her nurse said your moms not doing well, I sprinted to my moms room where I later witnessed half of the entire hospital staff arrive to revive her. There was one female staff member yelling she signed a DNR we can't do this! While I was screaming to bring her back. She did come back! We got to spend more precious hours with my mom. We held hands and she placed my hand on my husband's hand looked at both of us, shook our hands together while on a ventilator as her way of saying stick together through this life. That night was my husband's birthday. She was trying to pull the ventilator out of her mouth. I told myself the following morning I was taking her to Jacksonville, because they expressed my mom was being placed on palliative care. They told me she couldn't be resuscitated again. I just held her till she passed away which was nearly 12 hours later. They gave her morphine, but I felt her energy, she was still there and she was holding on. They told me in her ICU ROOM, because she chose to not vaccinate that this was why she didn't make it. I believe they wanted to kill her for profit. A unvaccinated persons death was a victory for them.
