

I believe my husband died needlessly on December 26th 2021 due to the St Joe's Medical Center in Brainerd, Mn covid-19 Hospital protocols.

My husband Bob was 72 years old. He got covid in early December 2021. Several days afterwards his friend took him to the ER since he felt lousy. The doctor asked Bob and his friend if they were vaccinated for covid-19. They both replied no. The doctor then started to treat them both differently than he did at first. Bob was told they didn't have monoclonal antibodies and nowhere in the state had any, except up in northern Minnesota in Thief River falls. He told Bob to register with Minnesota Department of Health to put his name on a list. Then get antibodies probably 5 days later. After arriving home from hospital he was signed up on Minnesota Department of Health website. No one ever did contact him, ever.

The next day one of our sons took him to a different Hospital. Horrible experience. Our son had to drop him off at the ER door he could not go in with him! Our son waited outside in the car . The doctor sent him home with oxygen and instructions for their protocols they were following for covid.

Several days later he did a zoom follow up with the ER doctor. He asked her if he could get Ivermectin and hydrochloroquine. Our granddaughter had flown in from Florida and said Florida was using those prescriptions. They didn't have issues like other states. The doctor said no she could not prescribe that. Granddaughter asked the doctor on the zoom why Florida was using those and why she wouldn't give her papa those medications. The doctor answered "because you live in a Red State and Minnesota is a Blue State. I can't prescribe those or I would lose my job." That is exactly what the doctor told her.

Bob started getting worse a few days later. We had to call an ambulance at 6:00 a.m. due to oxygen levels dropping. They would not let me go or come into the hospital. The hospital is only 20 minutes away. ER doctor called me 1 hour later said he didn't think Bob would make it through the night. I did not believe him! Bob wasn't that bad the whole time, just breathing getting harder. I was told there's no ICU rooms available. I told them to keep treating him, they knew I wasn't very happy with them. I could not go there to see him at all.

Later that day an ICU room opened. The next morning our daughter and son went to the hospital asking to see the rules for their visitation. They gave them to her. After reading thoroughly she went back in the hospital and asked to speak to the Chief medical officer. They could not keep us from visiting him. They allowed one person only and we could alternate.

They did not give him food. They did not give him IV fluids.

One day my daughter and I were exchanging places. A respiratory nurse came in. She talked and talked about people not getting vaccinated and why this was happening. She told us they have been preparing for this since 2015! My daughter and I could not believe it! This experience was like an Alfred Hitchcock movie.

Too much information and not enough room to share. Of course Bob got weaker and after two and a half weeks he passed away the night after Christmas, 2021. When I got the notes from the funeral home several months later, there wasn't much on there. However he was emaciated, he had lost 30 lb in 2 and 1/2 weeks at the hospital. We were married 52 years. He should still be here if I would have brought him home instead.
