

my Husband and daughter (my daughter was born with Down Syndrome) came into the hospital to be checked for covid. was told they were both positive and needed some oxygen. after being asked if they were vaccinated and told they were not they said the only ones surviving were the vaccinated then told they had to be put on a ventilator or they would die. scared I gave permission to put my daughter on but my husband refused. when I came back into the room my daughter was heavily sedated on morphine and fentanyl and also on paralytic medicine and a do not resuscitate on her wrist my husband was given the same sedatives. I don't know what else because he was too sedated to tell me what all they gave him

I asked (begged actually) for ivermectin, monoclonal antibody, hydroxychloroquin, c drip all the things the front line Dr's told me to ask for they even offered to come in and administer it themselves. No was the answer because it's not protocol. a week later they said she no longer tested positive for covid and talked about weaning her off the ventilator but the next day she was burning up with a fever

I asked about antibiotics because there was obviously an infection somewhere. I was told not until they discover what the infection was from. three days later her lungs filled with fluid and her oxygen was at 35% she had sepsis from bacteria on the ventilator 19 days after she was admitted she died I never got to talk with her once she was put on the ventilator two days later my husband also died. I was treated like the enemy. I was checking her patient portal and found that they had not been truthful about when I asked for the c drip they said they did but according to her chart they just gave her 500mg of C. when I brought it to their attention they started changing what they entered in her patient portal chart. I lost my whole world in that hospital. I was no longer a wife or a mother.
