

8/15/21-Jerry became sick tested positive for Covid.

8/16-20/21-Called Jerry's doctor UCDavis for appointment. Transferred to Advice line-was told there was no medication and he must be seen at an emergency room to receive treatment. I requested monoclonal antibodies, Regeneron, hydroxychloroquine, and ivermectin-all denied.

8/22/21-Ambulance transported Jerry to Vaca Valley Hospital, Vacaville California for evaluation. Physicians examined Jerry and determined that he had pneumonia and Covid. Both Jerry and I stated no Remdesivir use-administered anyways. Jerry was pushed out into the hallway and transported in the middle of the night to North Bay Hospital, Fairfield, California, which was locked down with no admittance to family except at the end of life.

8/23/21-Jerry placed on a CPAP machine, given a bedpan and told that he could not even get out of bed to use the restroom.

8/24/21-I called Jerry and he told me that he was hungry. I called the nurse's station and asked for his assigned nurse. I asked if Jerry had missed breakfast and could get some food. She stated loudly "No-we don't feed them. They need air more than food." I replied no they need both to recover. She snapped "Look we are BUSY-extremely short staffed, we don't have time to feed them". I called the Nursing Supervisor who stated that I misunderstood the nurse. I needed to be more understanding how understaffed, overburdened they are. I volunteered to come in immediately for my husband's care and meals. She told me "No, we're in lockdown-it's strictly against hospital policy." I called Jerry later and asked if he received any food. He told me they brought a container of yogurt and the moment he took a bite, the nurse shoved the CPAP tube into his mouth causing him to choke so no.

Contacted patient advocate services at North Bay-left voicemail expressing my desire to have Jerry transferred to UCDavis. I called UCDavis to see if I could get Jerry transferred into their care. Transfer denied-I was told both hospitals were at max capacity.

8/25/21-Jerry placed on a BiPAP machine. I called his nurse and asked if there was a better position to sleep in for breathing. She stated yes I told him to sleep on his stomach, but he declined and I can't force him. I asked if they could place pillows in his bed to assist.

8/26/21-I was told Jerry was being transferred to the ICU so they could give him better care and they needed to drain some fluid off his lungs. I stated NO VENTILATOR and to ensure it is explicitly documented throughout his medical records. I requested treatment of his pneumonia using standard practices. The Dr promised 3 times Jerry would not be placed on the ventilator. He was ventilated.

Every doctor I spoke to mentioned Jerry's age (75), the fact that he was not vaccinated but had his chance to be and the amount of days in ICU.

8/27-9/1/21 Jerry's condition worsened on ventilator-oxygen increased to 100%.

9/2/21-Oxygen decreased to 60% was told positive healing progression.
9/7/21-Oxygen decreased to 55%. Goal for ventilator removal at 40%.
Scheduled tracheotomy for Jerry's safety and comfort.
9/10/21-Tracheotomy cancelled extreme doses of antibiotics administered.
9/11/21- Dr Haider told me 90% of patients die.
9/13/21-Regeneron in stock pharmacy refused to let Dr Lineberry administer.
9/14/21-Placed on kidney dialysis for kidney injury due to medication.
9/15/21 Out of treatment options strongly recommend NO CPR
9/16/21 Jerry passed 0647.
