

My name is Ralph Lorigo and I am an attorney.. now.. for over 50 years in Western New York.

Like most of my generation...I was a believer in what was put forth by our governmental agencies...like the FDA.. the NIH, and the WHO... I generally believed that medical professionals would do everything under their power to treat individuals and save lives.

That substantially changed in 2021 !!

It all started with an 80 year old woman.. taken to a local hospital...diagnosed with COVID ...placed on a ventilator in ICU. Her family was told she only had a 20 percent chance to live. Her son watched Dr. Pierre Kory testify in front of this Senate and became a believer in the drug Ivermectin, He convinced the ICU doctor to give his mother one dose of Ivermectin.

After only one dose.. she was able to get off the ventilator and out of ICU. She was placed on the Covid floor. She started to decline and her son wanted the doctors to give her more Ivermectin... but they refused. He contacted me and we immediately drew a lawsuit against the hospital.

I was successful... the Court ordered the hospital to administer the Ivermectin ...and six days later, that woman left the hospital. She is alive today. She attributes her survival to the success in that lawsuit.

I then received a call from a woman in Rochester whose 65-year-old mother was in a similar situation. I sued the hospital... we were successful... the hospital administered the Ivermectin and that woman survived.

I was then contacted by the owner of Trial Site News,a podcast. I went on that podcast to explain these cases and the flood gates opened.

As time progressed, I was getting 30 to 40 calls a day for help.

I represented a woman in Illinois whose husband was in the hospital on a ventilator. I sued... but lost... This woman became my hero.. She crushed up the Ivermectin herself and brought it to the hospital every day and put it in her husband's feeding tube. He had been on a ventilator for 37 days but she would not give up... The hospital did not know what she was doing.. But he survived. The hospital considered it a miracle;... I consider her the ultimate hero.

I sued Rochester Hospitals six times. I won in Court each time. The first three times the hospital gave the Ivermectin and each patient survived. The last three times the hospital stalled and refused... until the patients died!

I became friends with Dr. Pierre Kory and the Front Line Covid Alliance. Dr. Simone Gold came to my office from California to talk to me about my experiences. I was contacted by the International Covid Summit which originates out of Rome, Italy, and developed an alliance where we met virtually every Wednesday with 25 doctors from around the world ..who used Ivermectin successfully for their patients.

I represented 212 families across 40 states. Of 212 cases.. I won 72. Of those 72 cases I won.. only three people died. That is a 95.8% success rate on survival.

Tragically, of the 140 cases where I could not get into court quick enough... or I lost, each and every one of those people died!

There are so many stories that I could tell you regarding my one year experience... It turned into seven days a week... ten hours a day... but it was the best experience of my life... I believe I was able to help people ...and save lives... I believe that Dr. Pierre Kory.. Dr. Paul Marik... Dr. Robert Malone..Dr. Alan Bain.. Dr. Mary Bowden and so many others are the great heroes. They sacrificed so much to help all of us ...Dr. Kory took my calls at all times of the day and night, to help my litigation! I believe that our health system needs modification.

We need a national "Right To Try "act that includes "off purpose "drugs. This is no longer about COVID or Ivermectin ...This is about medical freedom and the right to try..this is about governmental suppression and how giants like Big Pharma control our destiny !
